se:works implements intelligent functionality to create an emotional impact. The system is sophisticated, modular and perfected for multiple use. The modules can be used on their own, or simply combined and connected to each other. The system incorporates bench elements with no backrest as well as armchairs, sofas and personal workstations. These are available with or without visual and acoustic screens. The complete range of elements includes shelves, tables and cable management for power and data.

The modular system of base elements offers unlimited options for the personalisation of the working environment. Each linear *se:works* module can be ordered to meet the specification of your space, exact to the nearest centimetre. So whether you are creating an open, modern workspace or an office in an historic older building, every working environment can be designed in the optimal way, to create whatever working culture is most appropriate for you.
